

EXPERT

Classic Minesweeper, where the first click is 0...8. When comparing whether best front cell or nonclicked unseen cell (n.u.) should be guessed, it uses the min n mines in front, that is, the 'worst case scenario' regarding nonclicked unseen cells. This essentially favours guessing into front more than in n.u. cells														mode expert, CLASSIC (1st click: 0-8)

results: Becerra had 32.90% won, 4.73 guesses/game. "Shuffler" on Minesweeper Community Discord created a solver that wins over 41% of classic expert games, and wrote that 5.1% classic games should be won without guessing (those are the results he has obtained from millions of expert games).

mode														
Same as above, except guessing prob comparer uses BEST case uu_cell safe probabilities instead of WORST probs. This is a test.													expert, CLASSIC (1st click: 0-8)
